 - Allow Google Login***: Yes
 - Google Client Id**: 111111111111
 - Google Client Secret**: (empty field)
- Google Recapcha**
 - Allow Google Recapcha***: No
 - Recapcha API Key**: 22222222
 - Recapcha Secret Key**: 1111111111

2- Visit Google developer site.

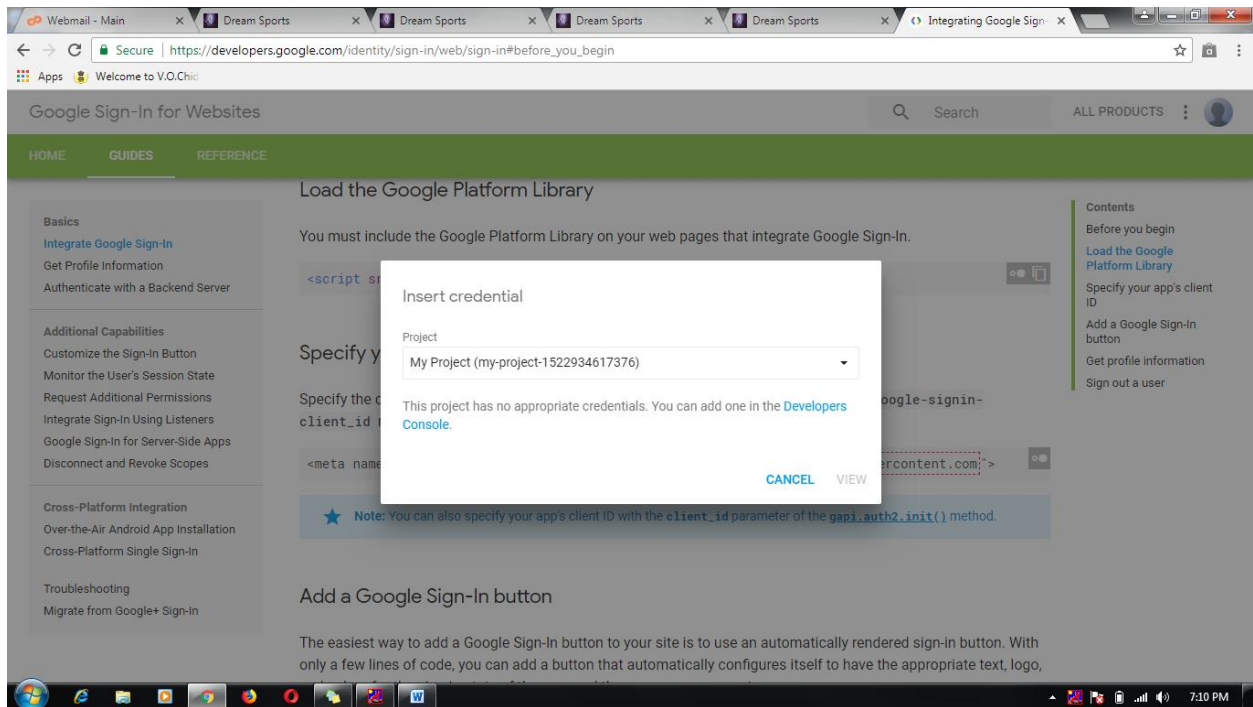

Link: https://developers.google.com/identity/sign-in/web/sign-in#before_you_begin

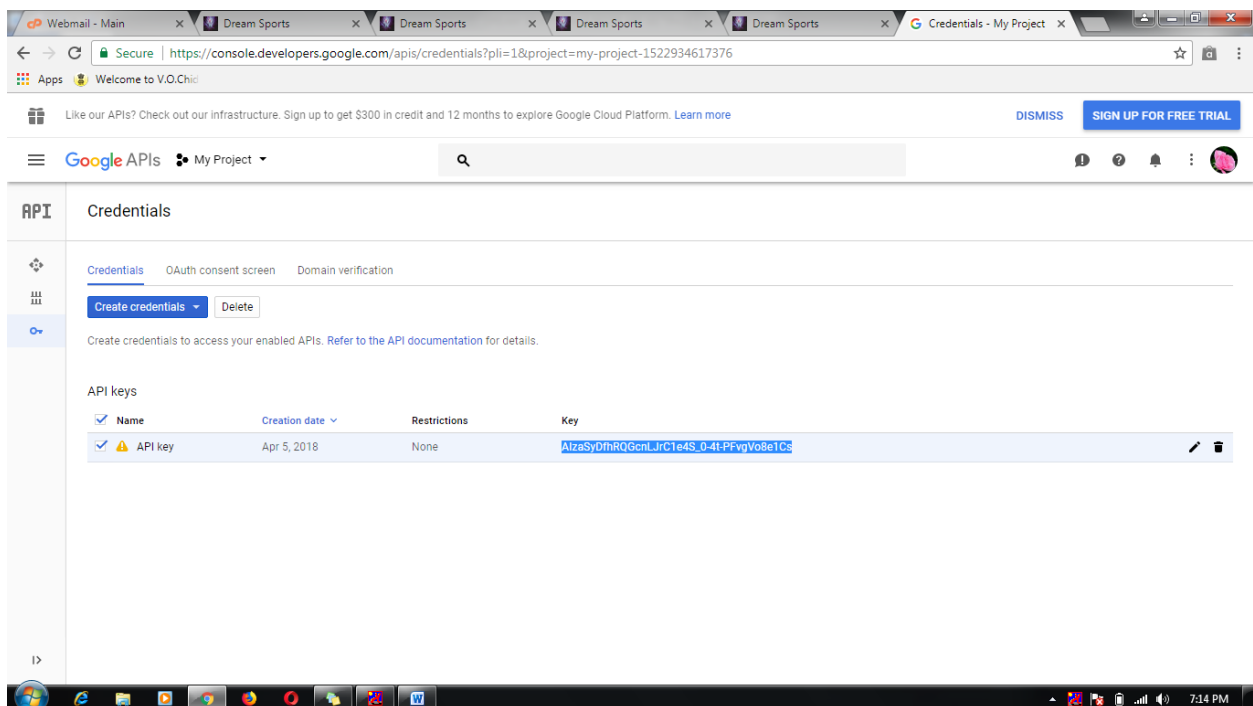

The screenshot shows the Google Sign-In for Websites developer page with the following content:

- Google Sign-In: Introduction**
- Before you begin**
 - Before you can integrate Google Sign-In into your website, you must create a client ID, which you need to call the sign-in API.
 - To create a Google API Console project and client ID, click the following button:
[CONFIGURE A PROJECT](#)
 - When you configure the project, select the **Web browser** client type and specify the origin URI of your app.
 - After configuration is complete, take note of the client ID that was created. You will need the client ID to complete the next steps. (A client secret is also created, but you need it only for server-side operations.)
- Load the Google Platform Library**
 - You must include the Google Platform Library on your web pages that integrate Google Sign-In.
 - ```
<script src="https://apis.google.com/js/platform.js" async defer></script>
```

### 3- Get in first client id number.

### 4- After click developers console and you will get in application secret key.

## 5- Take the client key and secret number to apply the Google API settings.
